## **Bug fixes:**

- IP Settings storage after upgrade/reboot Fixed

## **Caution conditions:**

- With installing this new firmware version, make sure to reset the NCC-1222 with a Factory Default.
- The HEX switch on the RPS-UNI **MUST** match with the installed power supplies to get correct overcurrent warnings. There is not control line between the NCC-RPS to monitor if the HEX switch is correctly set by the technician because of short in hardware lines.
- When the Session on the Website is not Saved or Restored before the website is closed, the last position will stay active till:
  1. Reboot of NCC-1222
  2. Reopening the specific configuration Website address. When readout of the SNMP value is equal to the actual state or the last Website situation. Always press Save or Restore after closing the Web session. This can't be overruled automatically since Web is only a readout and not a host.
