1 Introduction

This document contains information about how to upgrade the Application firmware or new Application firmware to a UCC-321 Controller V1.0.

In this document we will guide you through the upgrade process and explain in clear steps how to upgrade the UCC-321 firmware platform.

2 System and software requirements

To upgrade the UCC-321 system to version 1.0 you need at least the following:

Hardware:

Upgrade Target device:

- Working UCC-321, powered in MRO-100/BP rack or eq.
- Network connection to UCC-321 (Locally connection preferred but network connection also possible)
- Network cable straight

Upgrade Source device:

- Windows XP, Vista SP2, Windows 7 SP1 or Windows 8 Operating system with 32-bit: x86 class processor or 64-bit*: x64 processor
- 32-bit systems: 1 GB minimum, 2 GB or more recommended; 64-bit systems*: 4 GB or more recommended

Software:

Installed on upgrade Target device:

- None

Installed on upgrade Source device:

- Microsoft .NET Framework 3.1 (version 4.5 preferred)
- Firefox Web browser (<http://www.mozilla.org>) or Chrome.
- Technetix Ethernet Discovery System (*supplied with upgrade package*)
- Controller Bootloader x2xx Installer V1_2 setup package (*supplied with upgrade package*)
- Technetix MIB file for MIB Browser “**Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib**” (*supplied with upgrade package*)
- MIB Browser iReasoning, (<http://ireasoning.com/mibbrowser.shtml>) version 9.5 or eq

Firmware:

- FW version 1.0 “**HE103287 76 UCC-321 Application V1_0 2019-05-03.ucc3**” (*supplied with this upgrade package*)
- Web GUI File for Web interface “**HE103287 76 UCC-321 WebGUI V1_0_2019-05-03.bin**” (*supplied with this upgrade package*)

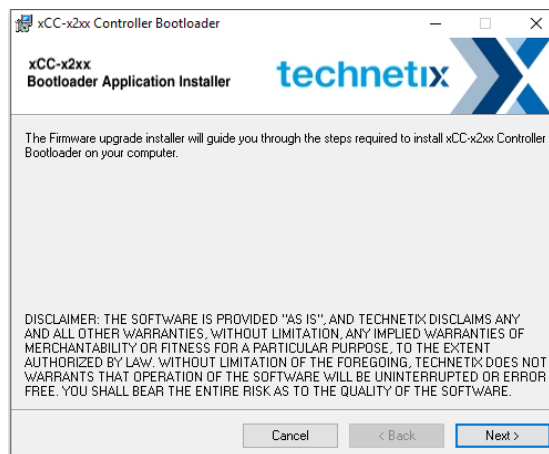

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED

3 Installing xCC-x2xx Controller Bootloader Application V1.2

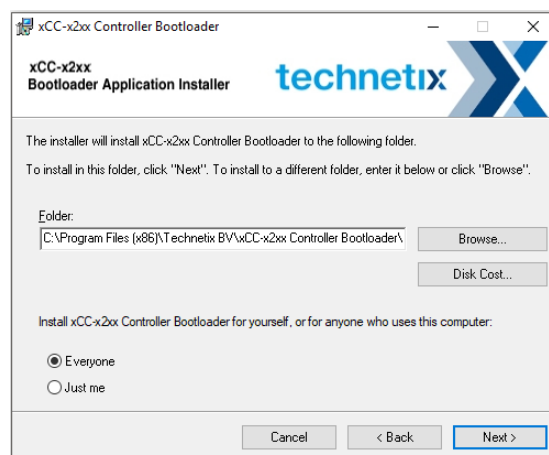

For upgrading the UCC-321 Technetix has provided a special upgrade tool. This tool is able to update an UCC-321 and the NCC's as well. You can find the tool in the Upgrade application tools -> xCC-x2xx Controller Bootloader directory.

Double click on the setup.exe and the installation wizard will guide you through the installation process.

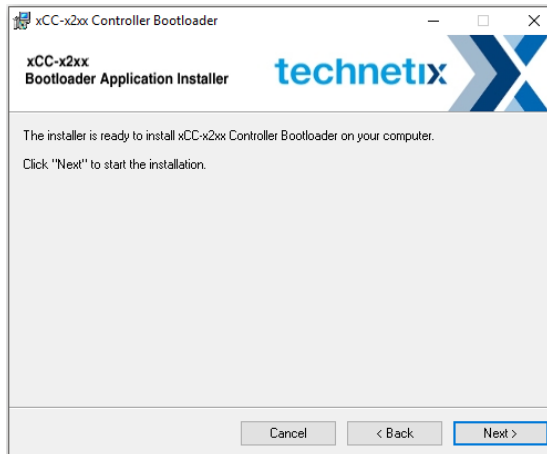

Press the “Next” button

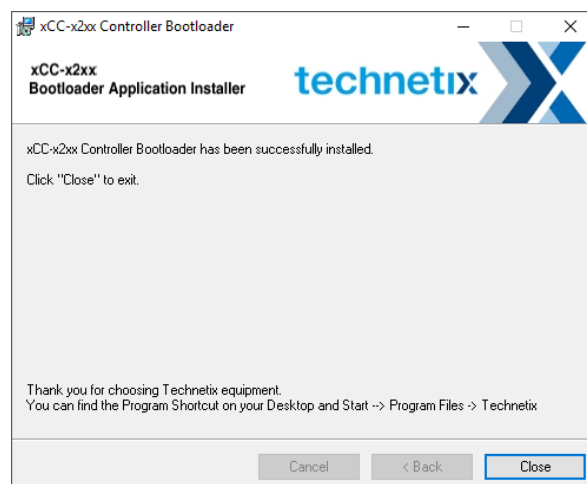

Press the “Next” button

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 4 of 22	Author	J. Janssen	Date	03-05-2019

Press the **“Next”** button

The installation will be in progress...

Installation Complete. Press the **“Close”** button

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED

Page 5 of 22	Author	J. Janssen	Date	03-05-2019

After installation, a Program files startup icon is created, and you can find an icon on your desktop to startup the bootloader application.

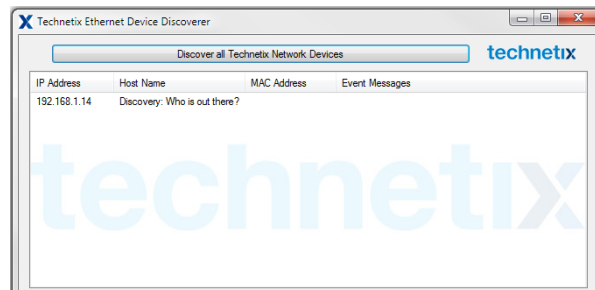

4 Discover the UCC-321 IP address

Every UCC-321 does have a unique MAC address, and this MAC address is connected to an IP address. Default, in static mode the default IP address of the UCC-321 is **192.168.1.1**.

In most situations, a (big) network is used with DHCP configuration. In other situations, the UCC-321 has a static IP address in a specific subnet. So the IP address can be totally different from the factory default IP address. This makes it difficult to detect the correct and active IP address of the UCC-321. The IP Address is discoverable with a Technetix discovery tool, the “**Technetix Ethernet Discovery System**”.

The UCC-321 is the first device in this new range of products, which presents the IP address, MAC address and even event messages of the UCC-321 in one screen. When more than one UCC-321 units are online the list will grow, but the essence of the tool will stays the same.

Default, all UCC-321 will carry the Technetix host name, but when more than 1 device are installed in a network, we advise to give specific host names to each UCC-321 to make them more clear to discover (human readable). The **Hostname** can carry **15 characters (NETBEUI based)**

To use the tool, you don't need to have your computer configured in the same sub network. The discovery tool can detect every device on the network, as long as a possible router is not blocking the discovery request by the host (your computer). When you want to communicate with the UCC-321 to do the upgrade you need to be connected to the same subnet. This is a normal network rule you need to comply to.

When the UCC-321 is online in Bootloader or application mode, it is discoverable automatically when the Technetix Ethernet Device Discoverer is starting up, or when the button “**Discover all Technetix Network Devices**” is pressed.

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 6 of 22	Author	J. Janssen	Date	03-05-2019

In this example, the UCC-321 is locally connected to a Host computer (no DHCP, just static connection one-on-one). In the discovery screen the device is detected as IP 192.168.1.1 and the Hostname is "Default:" **TECHNETIX**. The MAC address is always unique and given in the screen. The last box is normally empty, but when there's a DHCP event occurred, the DHCP message is given in this box, indicating what's happened to the UCC-321 as an information message.

From this point, we discovered our UCC-321 does have IP **192.168.1.15** so we can use this IP address to start the upgrading session.

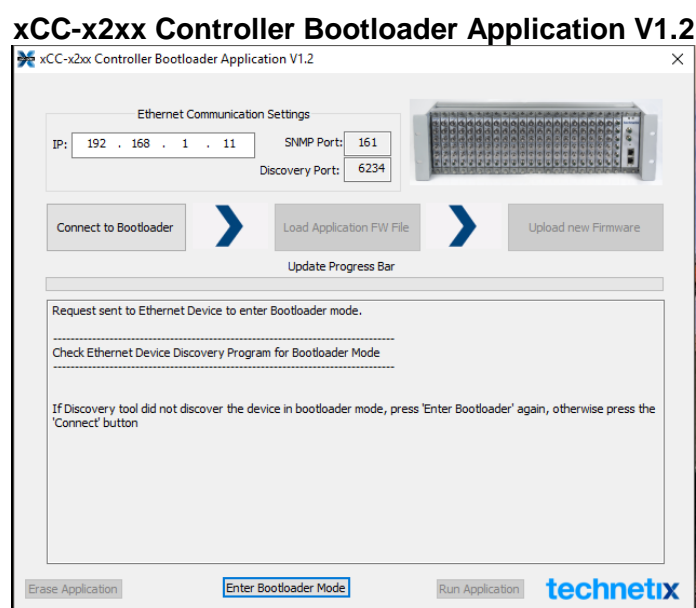

5 Firmware Upgrade

This chapter explains how to upgrade the UCC-321 Firmware. This is the core code of the UCC-321. The WebGUI is built on top of this firmware and need to start with V1.x to be compatible with this firmware release.

5.1 Using the Bootloader Upgrade Software

As described in the previous Chapter, to upgrade a UCC-321 module, you need a special PC application to set the UCC-321 in Bootloader mode. In this Bootloader mode the user is able to do a firmware upgrade themselves, without losing the amplifier settings or signal interruption during upgrade.

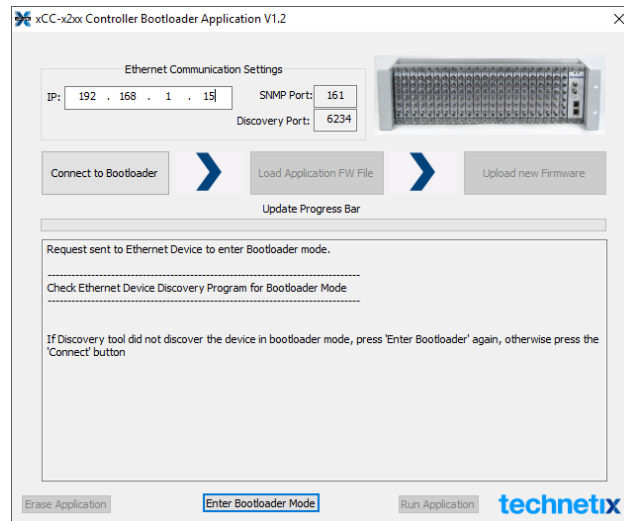

When you start up the UCC-321 Bootloader application, the following screen appears:

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 7 of 22	Author	J. Janssen	Date	03-05-2019

The Bootloader application is an easy tool to upgrade a device. When the module is in UCC-321 Application mode (normal operation) the Bootloader section is not accessible.

Since our UCC-321 Narrowcast Controller to upgrade has IP **192.168.1.15** we need to change the IP to this specific IP address:

To enter the Bootloader you need to send a special “**Enter Bootloader Mode**” command to the UCC-321 before you are able to reach the Bootloader section. This command is given by **pressing** the “**Enter Bootloader Mode**” in this application. The interacting with the Bootloader section is possible when the UCC-321 is connected through an Ethernet Connection and when the correct IP address is given for the specific UCC-321 to upgrade (use the Ethernet Discovery program to detect the IP address)

The specific UCC-321 IP address (Ethernet Discovery program, Chapter 4)

After this command the device leaves the application section and enters the Bootloader section. The Bootloader session will be accessible for max. 180 seconds. When this time expires, the application section is entered again when there is valid application firmware available. When there is no valid firmware available the Bootloader session will stay active, even when the time of 180 seconds is expired. When upgrade is started, 180 seconds timer is reset to zero.

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED

Page 8 of 22	Author	J. Janssen	Date	03-05-2019

5.2 Enter Bootloader section and upload (new) Application

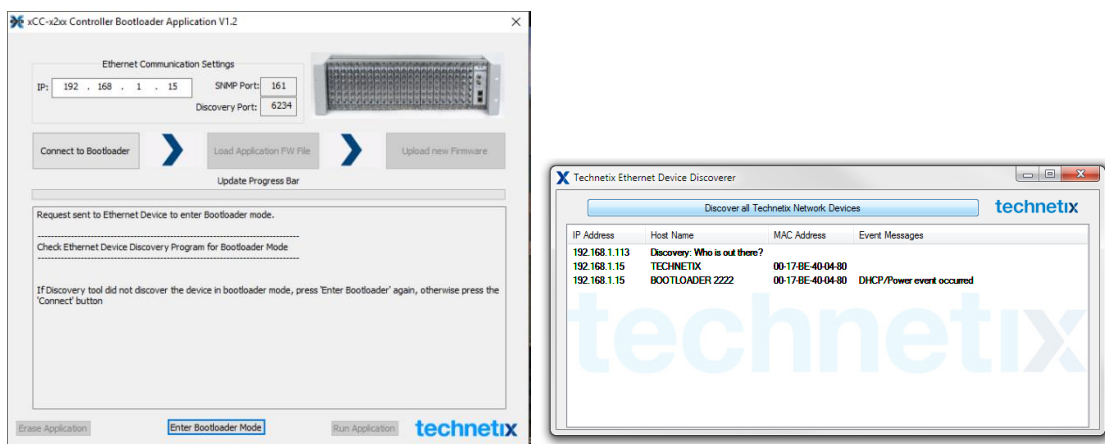

To enter the Bootloader mode, press the “**Enter Bootloader Mode**”. Be sure the UCC-321 is connected through the Ethernet and Powered correctly.

After pressing the “Enter Bootloader Mode” button, the following screen appears.

This warning box informs you that it will take 6 seconds to activate the UCC-321 bootloader section. To continue, press “**Yes**”, to abort entering the bootloader mode, press “**No**”.

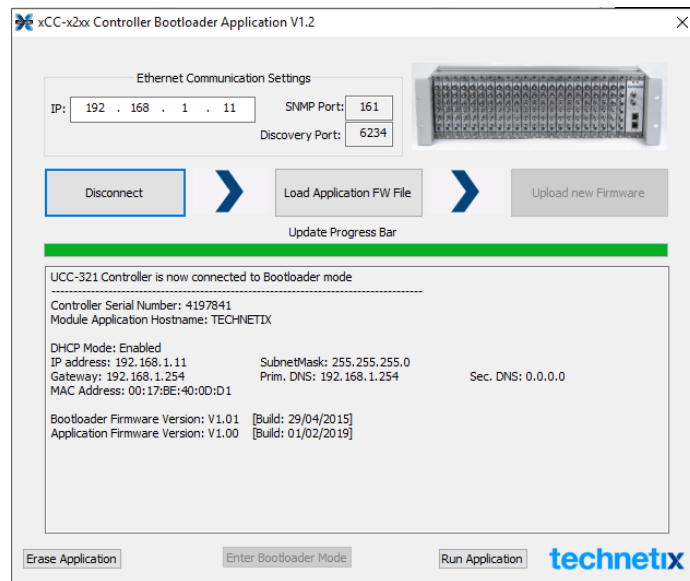

After pressing “**Yes**” the screen is frozen for 6 seconds, and then the following screen appears:

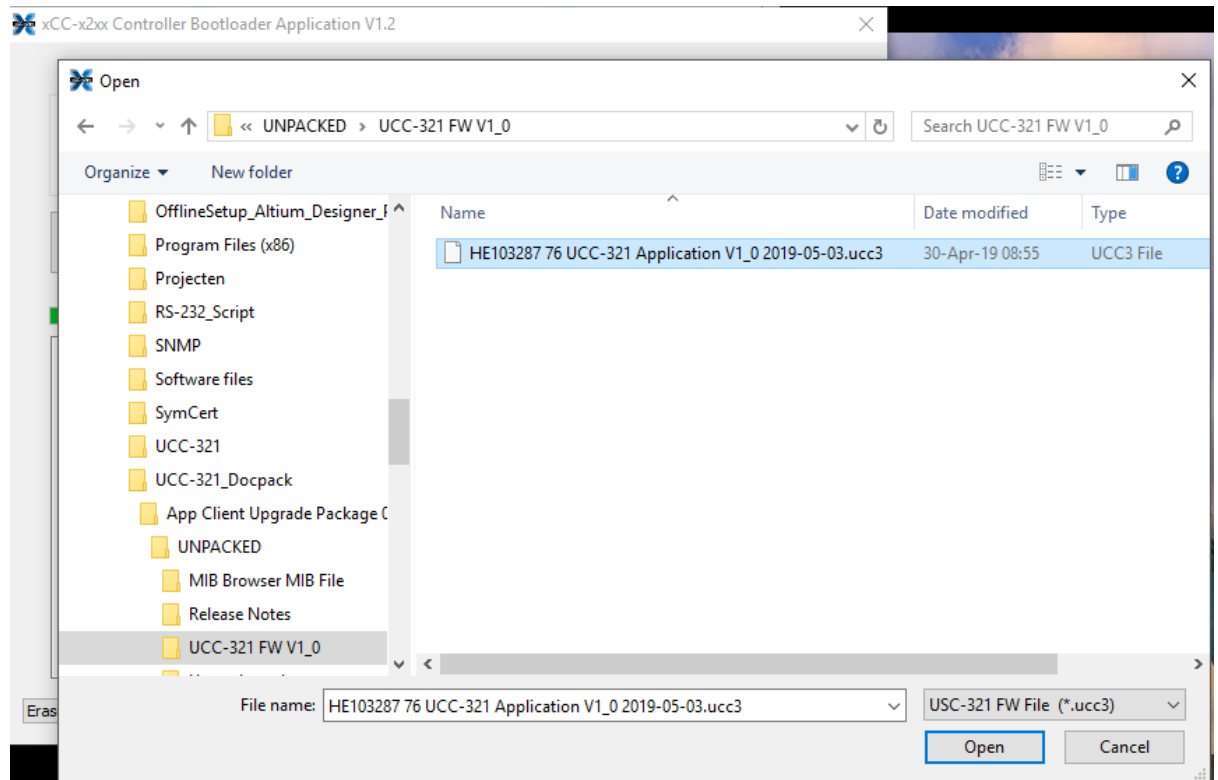

When the device is in Bootloader mode, and the “**Connect to Bootloader**” button is pressed, the device can communicate in the Bootloader mode.

*When you check now at the discovery program, it's telling you the Hostname is **BOOTLOADER** at the moment (Bootloader section) and there has been a **power cycle inside the microprocessor (Soft reset)**. The used IP address is based on the DHCP address or the static address as used in the application.*

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 9 of 22	Author	J. Janssen	Date	03-05-2019

Next, you need to load the .ucc3 file which contains the application data.

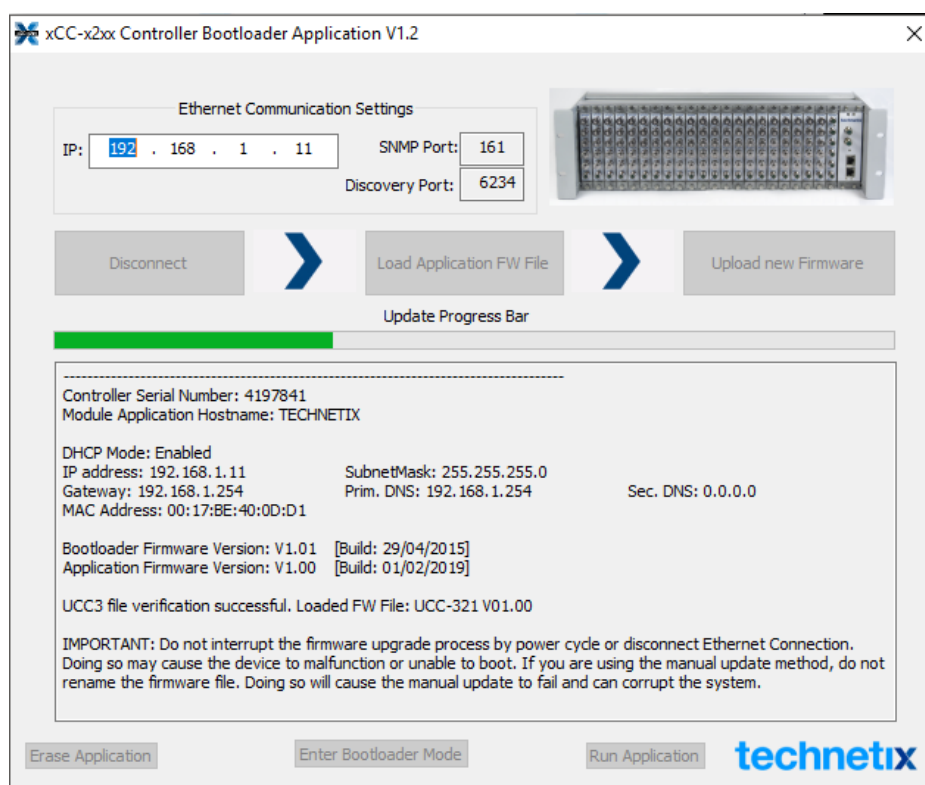

When the firmware is selected, “**Open**” the firmware.

The Selected .ucc3 file contains Firmware Application FW Version V1.0 for UCC-321

To upload the selected new firmware, press the “**Upload new Firmware**” button.

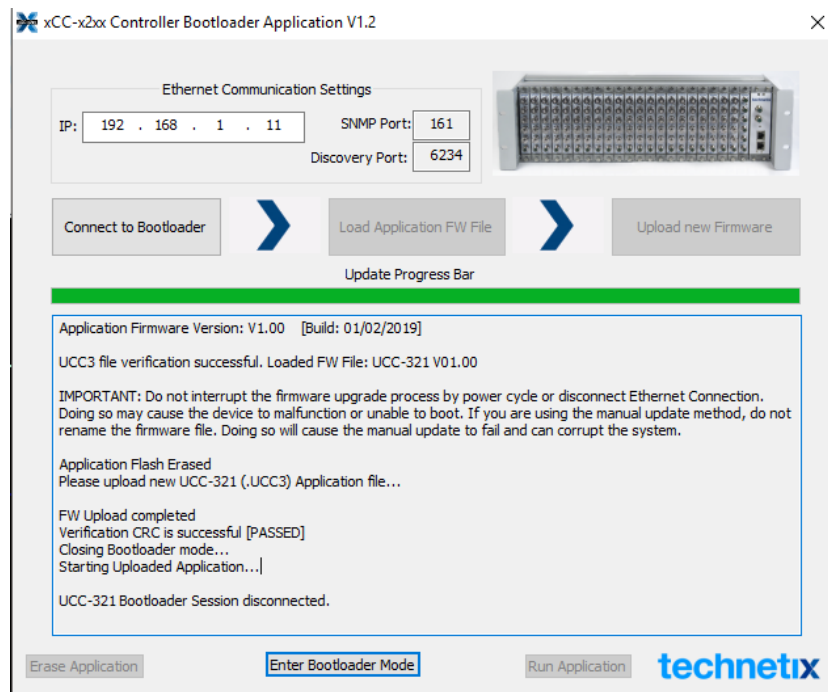

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED

6 GUI upgrade

6.1 Upload GUI BIN code for WebGUI

We have now upgraded successfully the UCC-321 core firmware, but on top of this firmware we also have WEB and SNMP support. Since the WEB interface is also updated, then we also need to upgrade the WEB support GUI to have total control of the UCC-321

To upgrade the WEB section, we use a **container** file, **.BIN**. This file contains all information for the WEB support and SNMP support.

Page 13 of 22	Author	J. Janssen	Date	03-05-2019

To upgrade the Web/SNMP GUI you need to access the following webpage:

http://<UCC_IP_ADDRESS>/technetixupload

In our example we use:

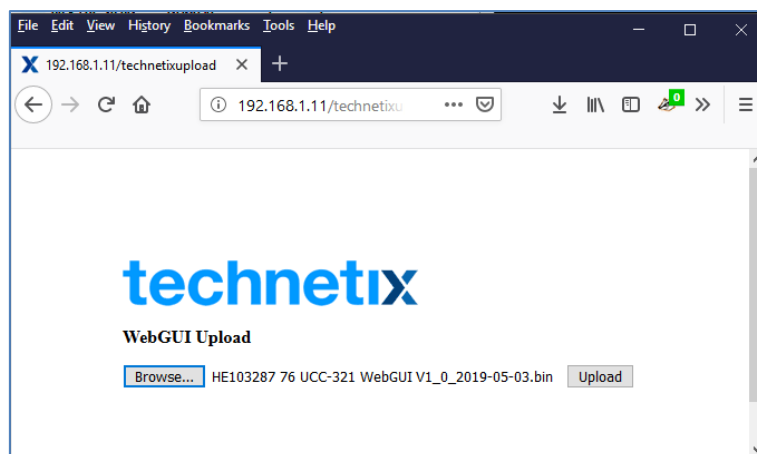

<http://192.168.1.15/technetixupload>

Now press the “**Browse**” button to select the BIN file on your hard drive. In our example we use the **C:\UCC-321 FW1_0** directory. Select the BIN file from this page.

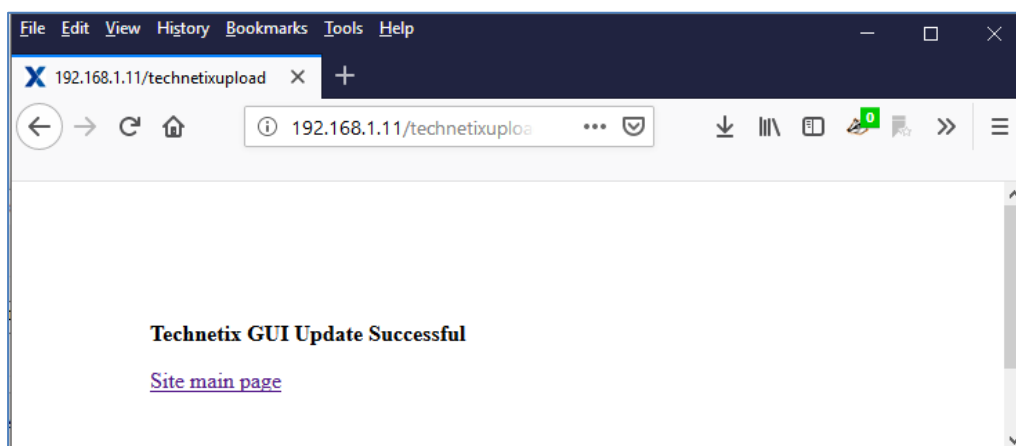

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 14 of 22	Author	J. Janssen	Date	03-05-2019

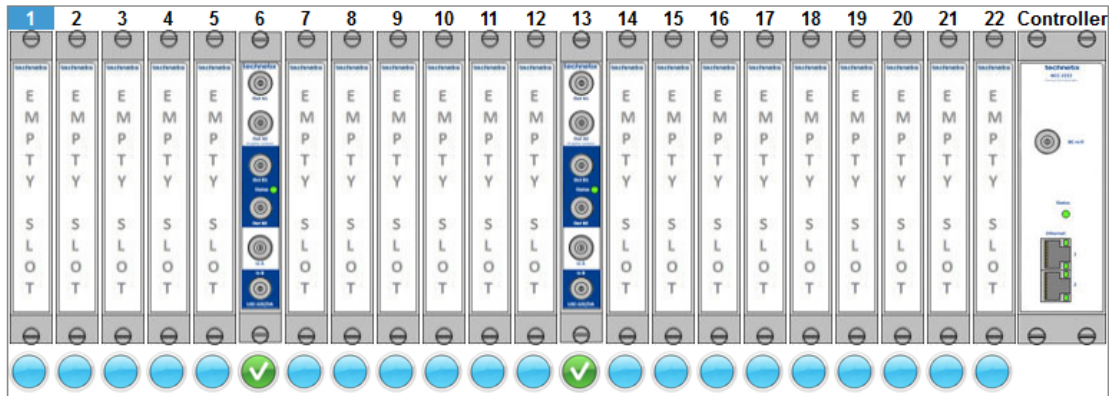

Now click the **“Upload”** button to upload the file to the GUI.

When the GUI is correctly uploaded the screen as given above will indicate **the upgrade of the GUI is successful** and you can continue by click on the text **“Site main page”** to return to the main page.

As the Homepage is on your screen again, you can see the Web Version is now also updated. The **Web version is now v.1.0** indicating the website is written for **Firmware version 1.0** The Web build date is now **2019-05-03**.

Everything is up and running now, but since new features are introduced, it's better to perform a factory reset of the UCC-321 if possible

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED

Page 16 of 22	Author	J. Janssen	Date	03-05-2019

7 Factory Reset the UCC-321 for optimal performance

For the optimal use of the new firmware upgrade, we always advise to do a factory reset after the firmware upgrade. This to prevent having incorrect or unsupported values for functions in memory which can cause strange errors.

Technetix always tries to prevent the direct need for a Factory default, so normally it is not necessary to proceed this action.

When a factory default is given, the UCC-321 will be set to all factory defaults settings for all functional settings **including the RF settings**.

CAUTION:
If the decision is made to switch back to factory default
we advise to do this during night time or in a not live
condition to prevent RF problems

7.1 Preparing to perform a Factory Reset UCC-321

To set the UCC-321 back to factory default, you need a SNMP MIB browser (iReasoning or equal) and a correct MIB file, supplied with this package: **“Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib”**

The installation process of the iReasoning MIB browser is out of the scope of this document, but all settings can be installed on default. When the installation is finished the MIB files needs to be activated in iReasoning. This is explained in the next chapter.

7.2 Configuring iReasoning for upgrading the UCC-321

As explained, you first need to install a MIB browser. In this document we will explain the MIB file installation process based on iReasoning MIB browser. This MIB browser is free to download.

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 17 of 22	Author	J. Janssen	Date	03-05-2019

In previous picture you find the iReasoning MIB browser. In this stage, no MIBs are configured, so we first need to add the **“Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib”** to our MIB database of iReasoning. You can Load the MIB from any location, but we prefer to add this MIB on the same location as the iReasoning MIBs in the correct installation directory.

The installation path for **“Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib”** is default:

C:\Program Files\ireasoning\mibbrowser\mibs. Just move the **“Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib”** file to this directory.

From this point, the MIB is available in the default MIB directory of iReasoning and can be accessed to load as MIB.

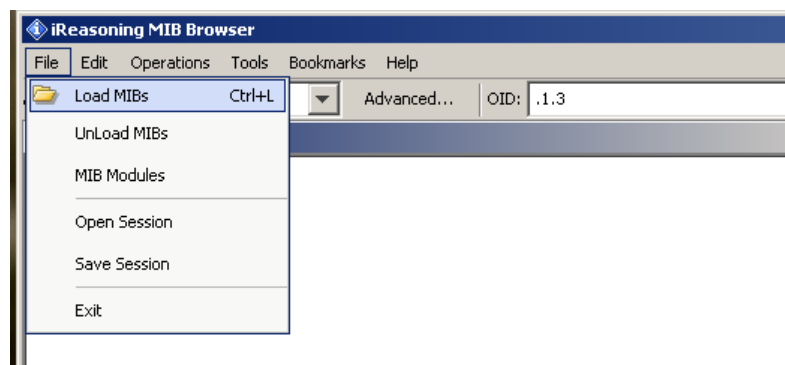

The UCC-321 supports also RFC-1213 commands default, so we also advice to load this MIB default in iReasoning to have full control of the UCC-321.

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 18 of 22	Author	J. Janssen	Date	03-05-2019

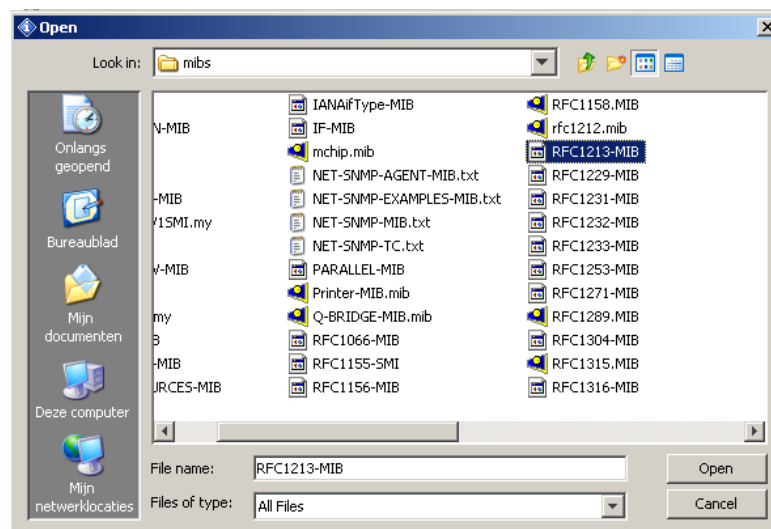

7.3 Load the MIBs for upgrading the UCC-321

To load the explained MIBs, “**Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib**” and “**RFC-1213-MIB.mib**” you need to select the 2 files:

File → Load MIBs

Now first find the file RFC1213-MIB and select “**Open**” to add this MIB to your MIB database.

Secondly, find the Technetix MIB, “**Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib**”

File → Load MIBs

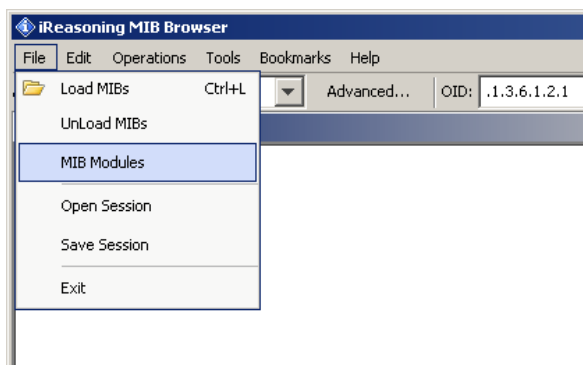

Now first find the file “**Technetix-GATEWAYS-MIB-SMI-V1-v1-9.mib**” and select “**Open**” to add this MIB to your MIB database.

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 19 of 22	Author	J. Janssen	Date	03-05-2019

When this file is also loaded as MIB, iReasoning does have the correct files to communicate with the UCC-321. Finally we do a check if all modules are correctly loaded:

File → MIB Modules

This will open a Dialog box which present the 2 installed MIBs. It must look like below:

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 20 of 22	Author	J. Janssen	Date	03-05-2019

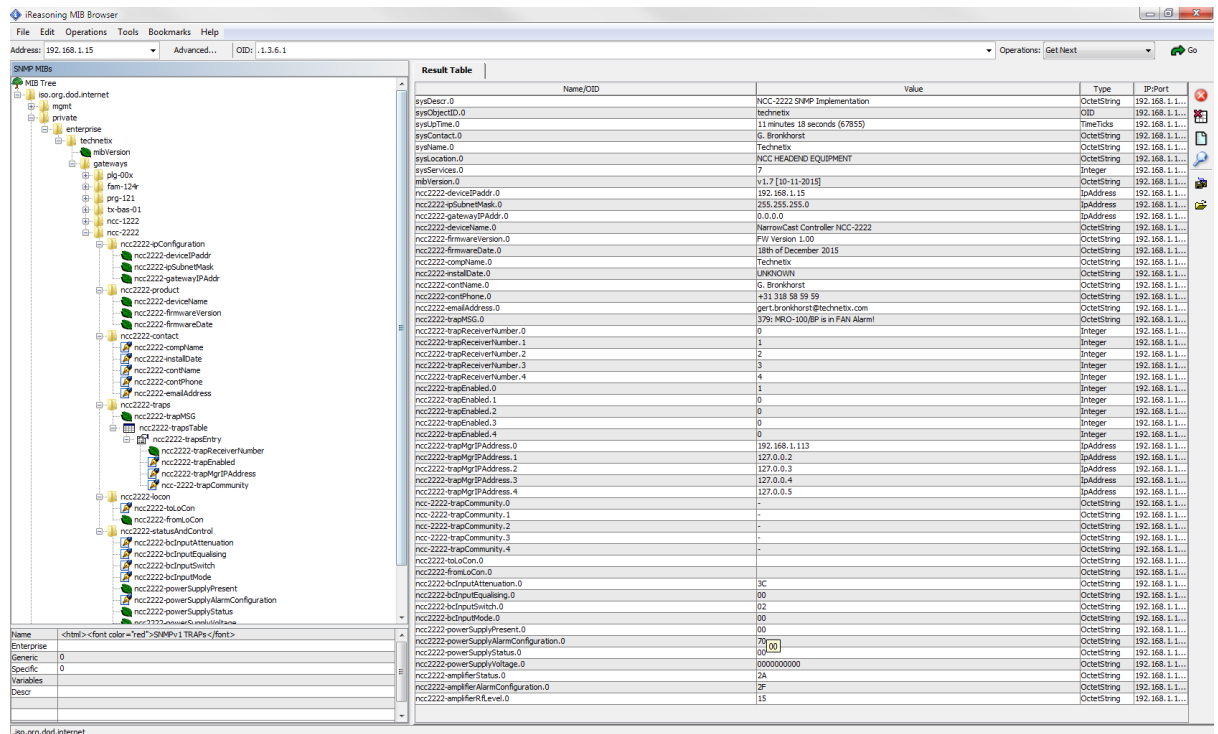

From this point the MIB files are correctly installed.

7.3.1 Perform a factory default for the firmware

We have now updated the firmware of the UCC-321 and the GUI of the UCC-321, we also need to perform a Factory default reset on this upgrade, since we changed some important setting locations in the memory. In future upgrades we will try to leave the memory structure as it is now, but if features changes, we may need to do a factory default again.

To perform a **Factory Default reset** you need the iReasoning MIB browser, and send a command with the **ucc321-toLoCon** (OID: .1.3.6.1.4.1.18063.2.32.6.1.0)

Technetix Ltd.	Class	Company Confidential	JJ/GBr	TESTED
	Title	FW Upgrade document for xCC-x2x V1.0	JJ	APPROVED
Page 21 of 22	Author	J. Janssen	Date	03-05-2019

To set a value in the ucc321-toLoCon OID you need to click on your **right mouse button** on the ucc321-toLoCon and select **"Set"** (CTRL-S)

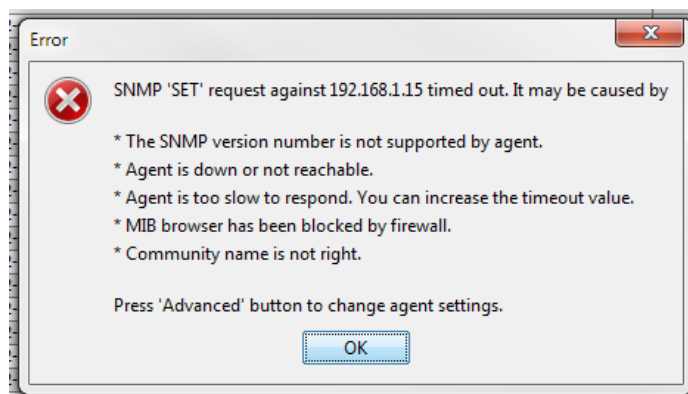

To give the command to perform a Factory Default reset, you need the value:

E2AFDF

It will take about 3 seconds, and then the node scanning will start again. The UCC-321 will reboot when the settings are all set to factory default.

Since the UCC-321 is leaving SNMP, iReasoning MIB browser is not able to communicate on SNMP with the UCC-321 so you will receive an error message, informing you about this situation.

Just ignore this message, and click on the OK button.

8 Firmware upgrade Finished

When you followed all described steps in the previous chapters, your UCC-321 is correctly upgraded to the latest version of the UCC-321.

Please read the release document to see all the changes and bug fixes and new features since last release (Version 1.0) "**HE103287 20 UCC-321 FW Upgrade Document V1_0.pdf**"

-= END OF DOCUMENT -=
